## The FarmPEAT Project I Habitat Scorecard

Dry Grassland

A.4 (i)

What is the vegetation structure in grasslands which are primarily used for grazing?

**Poor:** Most of plot (>75%) has either tall or short sward; intermediate sward absent or confined to small patches. Few flowering plants.

Ting planes.

**Moderate:** 25-50% of plot has tall and/or short sward with occasional to frequent intermediate patches.

10

**Good:** >50% of plot with sward having variety of taller and /or shorter sward with intermediate height sward throughout.

25

OR

A.4 (ii)

For plot closed off for hay/silage or recently topped.

**Poor:** No margin, field topped right up to field boundary line. No aftermath grazing. Little or no variation in sward height.

ittle or no flowering plants
eight. structure within poor to moderate grazing providing

variatio

present (~1m). Low number of flowering plants and vegetation structure within the field margin poor to moderate. Some aftermath grazing providing some structural variation

Moderate: Narrow field margins

5

Good: Wide field margins present (2m+) and/or good headlands. Aftermath grazing takes place providing variations in height of sward; sward does not look uniform in appearance

15

B. Threats to site integrity.

Score: \_\_/10

B.1

What is the cover of encroaching, immature scrub?

Encroaching scrub can be brambles, seedlings, scrub and trees generally lower than 1.5m height.

| >50% | 26 - 50% | 11 - 25% | 0 - 10% |
|------|----------|----------|---------|
| -15  | -10      | -5       | 5       |

B.2

What is the cover of bracken?

| >50% | 11 - 50% | 0 - 10% |
|------|----------|---------|
| -10  | -5       | 5       |

B 3

What is the cover of non-native species such as Rhododendron, Japanese Knotweed, Giant Hogweed, Winter heliotrope, Fuchsia, Cherry laurel, Snowberry, Giant Rhubarb? Include margins if present.

| Severe          | Moderate        | Slight                              | Absent |

## The FarmPEAT Project | Habitat Scorecard

Dry Grassland

B.4

Is there any evidence of poaching within the plot?

>10%

Areas of bare and eroding soil found at intervals e.g. along regularly used routes. Significant rutting caused by vehicles or animals. Excessive poaching. >10% bare and eroding soil in

1 - 10%

Areas of bare and eroding soil found at intervals e.g. along regularly used routes. Significant rutting caused by vehicles or animals. Excessive poaching. 1-10% bare and eroding soil in plot.

<1%

Bare soil seen only very occasionally e.g. along regularly used routes. Little or no signs of erosion seen. Some bare soil at 'pinch' points along regularly used routes (e.g. gateways, gaps in walls) is acceptable. May also be a few isolated bare patches and some damage from vehicles or animals. Very restricted in distribution and not excessive.

0

-20

-10

B.5

Is there any evidence of any damaging activities to vegetation or soil? Include margins if present.

Examples may include dumping (organic/inorganic), pollution or damage to soil, active quarry/sand pit, inappropriate use of herbicide, litter etc.

| >50% | 6 - 50% | 1 - 5% | None |
|------|---------|--------|------|
| -30  | -20     | -10    | 0    |
